

SportSlot

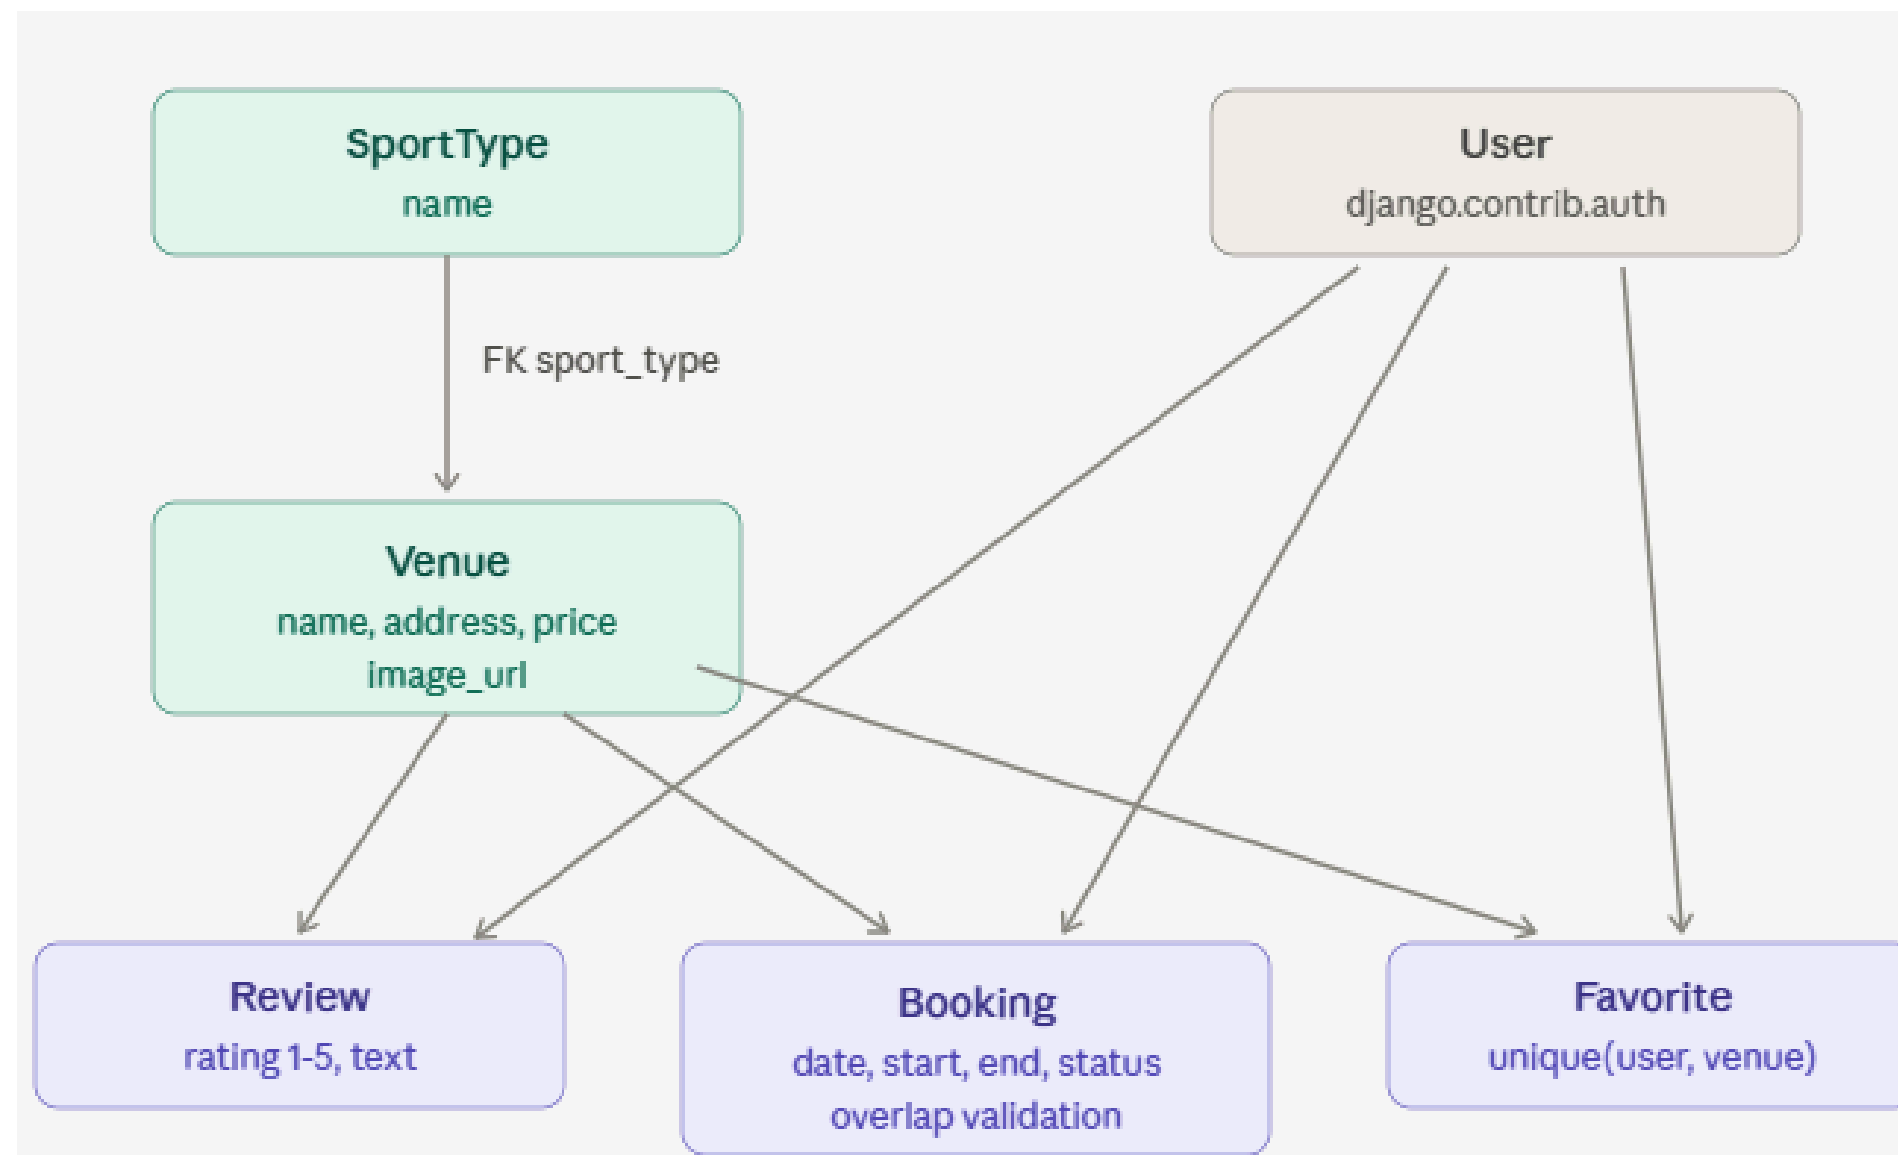

Sports venue booking platform

Team:
Boris Nurdaulet - Fullstack
Kudaikul Aruzhan - Frontend
Kapsikh Aibyn - Backend

github.com/NurdauletBoris/SportSlot
Django · Django REST Framework · Django Templates · SQLite

Architecture

Key logic — booking overlap validation

- New booking is rejected if its time interval crosses an existing one (start < existing.end AND end > existing.start)
- Cancelled bookings free up their slots
- Validation lives at the model level — protects both web forms and the API

REQUIREMENTS COVERAGE

FRONTEND

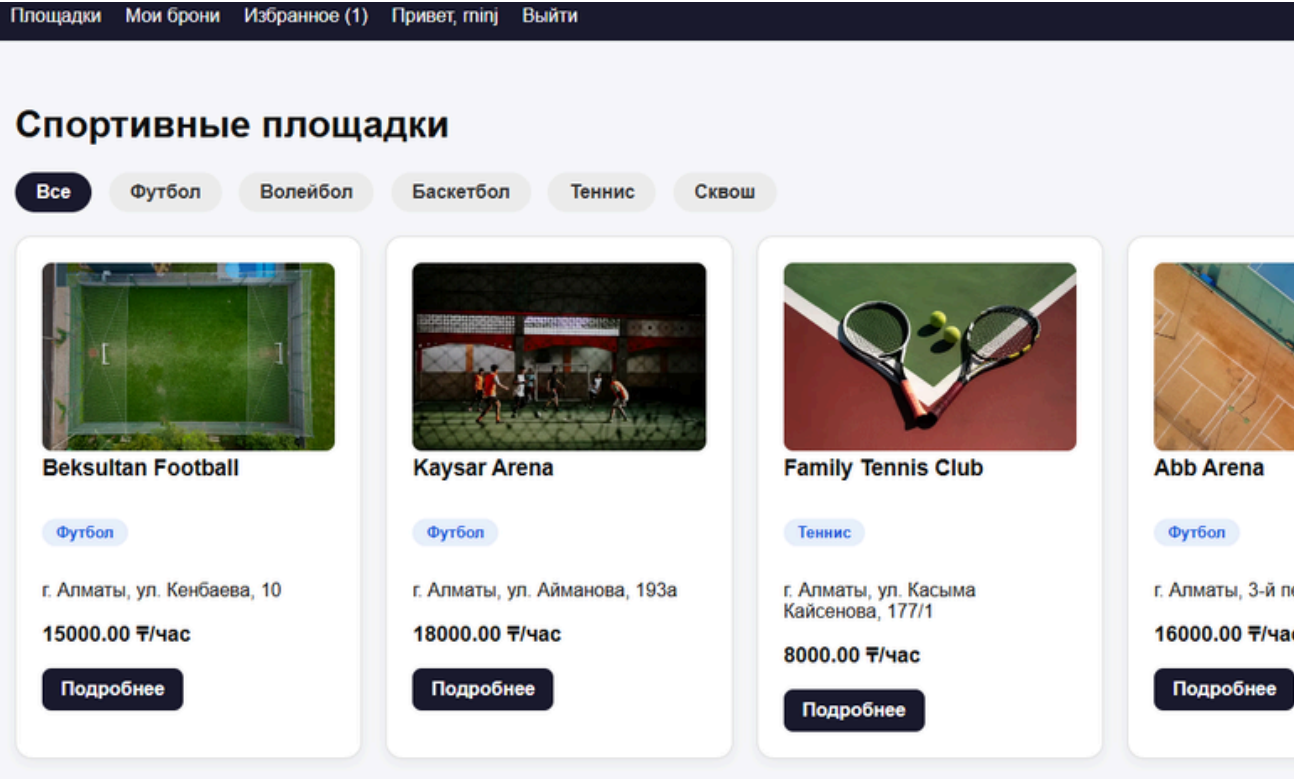

- ✓ Django Templates with base.html inheritance
- ✓ **4** forms: Registration, Booking, Review (ModelForm), sport filter
- ✓ **6** named URL paths, site-wide navigation
- ✓ {% for %} / {% if %} rendering on all pages
- ✓ Authentication: login, logout, registration
- ✓ Custom context processor (favorites counter) + custom template tag (rating stars)
- ✓ Error handling: django messages + form errors

BACKEND

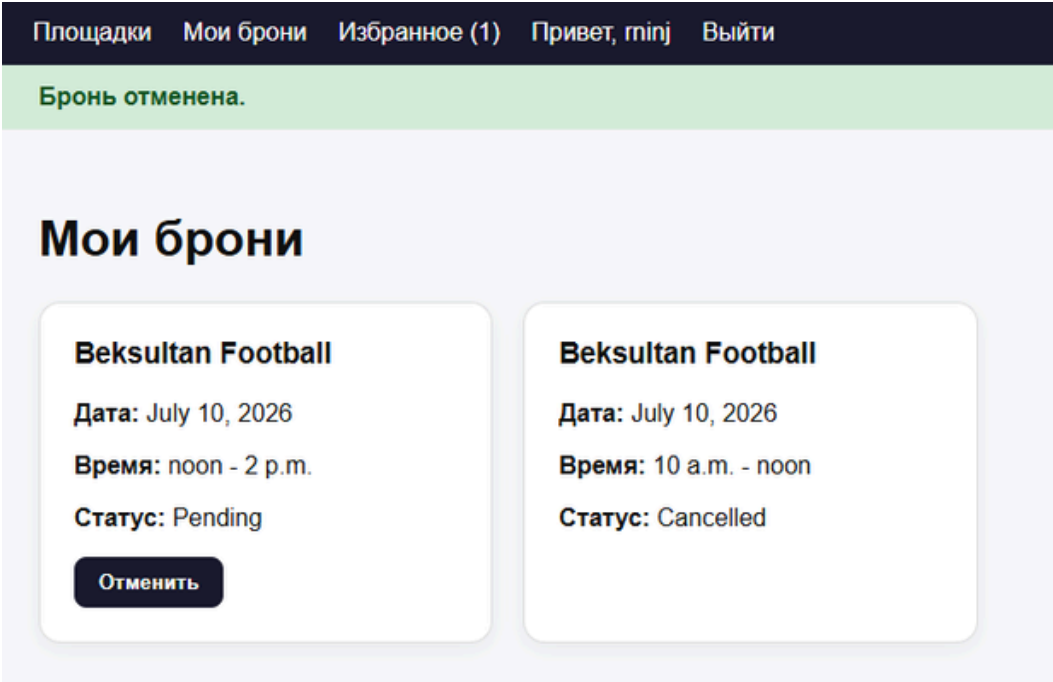

- ✓ **5** models (required: **4**)
- ✓ **6** ForeignKey relations (required: **2**)
- ✓ Serializers: **2** ModelSerializer + **2** Serializer
- ✓ Views: **2** FBV with @api_view + **2** APIView
- ✓ Token authentication (login/logout endpoints)
- ✓ Full CRUD for Booking
- ✓ Objects linked to request.user
- ✓ CORS configured
- ✓ Postman collection in repository
